Experience and Research interest:	<ol style="list-style-type: none"> 1. Extraction and Isolation of different natural plants classes: Saponin (Steroidal and triterpenoidal) compounds, volatile oils, iridoids, phenolic compounds (flavonoids, tannins, coumarin and phenylethanoid). 2. Structure elucidation of the compounds by ^1H-NMR and mass spectrometry (EI-MS or HRESI-MS) and the identification will be established also by the aid of the developed databases (Dictionary of Natural products (DNP) and Electronic Chemical Abstract). The new structures will be elucidated using different types of 2D-NMR experiments like ^1H-^1H COSY, HETCOR, COLOC, HMBC, HMQC and NOESY etc. X-ray crystallography also can be used for suitable cases. Absolute stereochemistry will be determined based on the properties of derivatives (e.g. Mosher derivatives), CD & ORD and NOESY spectra.
